

STORAGE LOCKER

Storage locker for security
entrances

Storage locker with manual opening doors.
Recommended for entrances controlled by walk-through
metal detectors.

This Locker has been designed for storage to be placed near the entrance of protected areas with Security Booths equipped with Metal Detectors.

It is manufactured in mild steel sheet with 15 mm thick doors.

It is possible to choose among four different combinations with 6, 8, 10 or 12 doors.

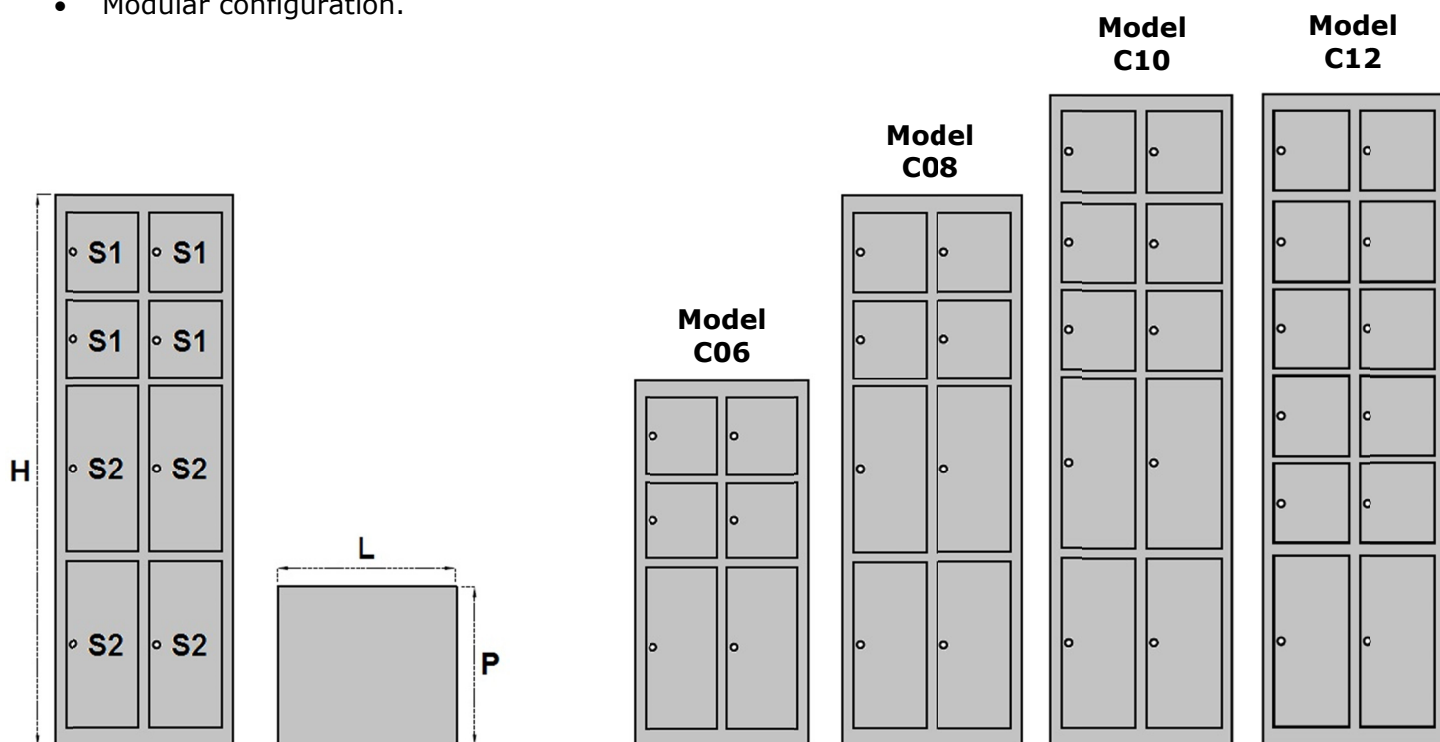

Structure in non-magnetic material and mechanical re-programmable security locks are available on request.

GENERAL FEATURES

- Storage locker made up of 30/10 mild steel structure painted with highly shock and corrosion-proof products.
- Embossed painting, any color from RAL Chart.
- Doors in non-magnetic material.
- Mechanical or mechanical re-programmable security locks.
- Modular configuration.
